**Telescopic Tread Leveller** — now offered to make levelling fast and easy! Simply bolt the steps to the steel walls and adjust the telescoping levellers to the correct level.

**Strength and Durability** — Fibreglass technicians with state-of-the-art laminating equipment ensure full control in directing the polyester laminate to all critical areas of the step. This maintains a completely engineered product.

**Structurally Stronger** — Fibreglass laminate is structurally a stronger, sturdier product than co-extruded material.

## TRIAC's Engineered Walk-In Step Featuring The New TTL (Telescopic Tread Leveller System)
